SUMMARY

Software Engineer building production web, mobile, and business applications across Laravel, Vue.js, React Native, and Odoo. Experienced in full-stack development, custom Odoo solutions, REST APIs, cloud infrastructure, and AI integrations, with a focus on taking features from requirements through production delivery.

EXPERIENCE

Software Engineer Jul 2025 – Present
Voidweb Plovdiv

Build and deliver production software for Inverso.bg and Voidweb clients across full-stack development, Odoo solutions, mobile applications, and cloud infrastructure.

- Product development:** Design and ship Laravel and Vue.js features for [Inverso.bg](#), a cloud platform for business finance and invoicing.
- Odoo development:** Build and customize Odoo solutions for clients, developing custom modules and extending ERP, CRM, eCommerce, and other business workflows.
- Mobile development:** Extend core product workflows to the official iOS and Android applications using React Native.
- Cloud operations:** Deploy and manage production services using AWS, Hetzner Cloud, Coolify, and Laravel Cloud.
- Team support:** Mentor students and interns through onboarding, code reviews, and practical development standards.

Intern Back-End Developer Mar 2025 – Jul 2025
Voidweb Plovdiv, Bulgaria

Developed Laravel APIs for client products, contributing to AI-enabled administrative workflows and the continued development of the Inverso.bg platform.

- AntennAI:** Developed AI-powered features for generating concise summaries and reports for administrative users.
- Inverso.bg:** Led development of a shared workspace enabling users to manage invoices and tasks in one place.

Intern Front-End Developer Jul 2024 – Aug 2024
Scalefocus Plovdiv, Bulgaria

Developed the front end of a barbershop appointment management system as part of a collaborative university practice project.

- Built responsive interfaces for appointment scheduling, user management, and profile management.
- Collaborated with the back-end team to integrate APIs and application functionality.
- Tested and debugged the application to resolve functional and UI issues.

PROJECTS

InsightSeek Present
[insightseek.vip](#)

AI Analysis for Code & Team Meetings

- Built an AI-powered platform for analyzing GitHub repositories and team meetings.
- Integrated Gemini AI and AssemblyAI to generate insights from source code and meeting transcripts.

Next.js Clerk Gemini AI AssemblyAI Prisma PostgreSQL

TeamSync Present
[teamsync.vip](#)

Project Management System

- Built a full-stack platform for task tracking and team collaboration.
- Implemented real-time communication, threaded discussions, customizable labels, and role-based access.

Laravel Inertia React MySQL

Barbershop Management System Present
[appointment-management-fe.vercel.app](#)

Appointment Management System

- Built a full-stack platform for appointment scheduling and user management.
- Implemented dedicated workflows for barbers, clients, and administrators.
